

Before letting BPL come to life, it is absolutely essential that you are 100% certain that it will not cause RFI or any other tpe of interference to any Amateur Radio band. There are nearly 650,000 Amateur Radio Operators in the USA, thousands of whom use Amateur Radio as part of their livelihood. Several thousand Amateur Radio operators are already having a very difficult time dealing with the RFI that is being generated by plasma televisions. It is unthinkable what the effect would be if our hobby/careers were rendered virtually useless because of this new, and potentially catastrophic technology.
